

IPitomy Router/Firewall

VoIP Optimization - Security - Prevention - Diagnostics

IPITOMY
SMARTER BUSINESS COMMUNICATIONS

IPitomy Cloud Powered Router/Firewall - Better VoIP - Better Internet - Better Security - 24/7 Monitoring

VoIP Calls Don't Have to be Sub-Standard

The primary reason VoIP calls do not have exceptional audio quality is because they are not optimized for priority in your router. IPitomy knows this and introduced an innovative solution to this problem. VoIP calls are pure digital audio, and since they are digital the audio should never sound less than perfect. VoIP priority ensures quality calls and business continuity

The Solution

IPitomy's solution uses advanced technology to shape all of the traffic coming into and out of your Internet connection to optimize and prioritize the VoIP packets. The result is pure crystal clear audio on every call. With audio this good, callers will sound like they are in the same room! IPitomy automatically calibrates your Internet bandwidth at startup. These bandwidth settings assure that VoIP calls always sound their best without requiring any additional adjustment .

Cloud Powered Solution

The IPitomy Router/Firewall takes advantage of the Cloud to reduce the cost and time required for maintaining and supporting the security solution. All of your Internet management requirements are simplified and managed through IPitomy's Cloud based Monitoring and Diagnostics.

Security

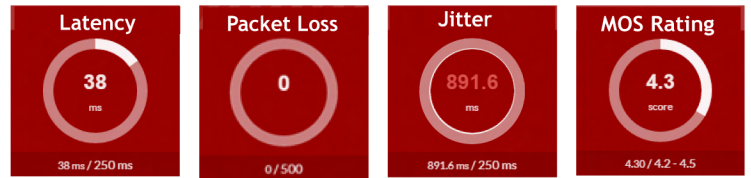

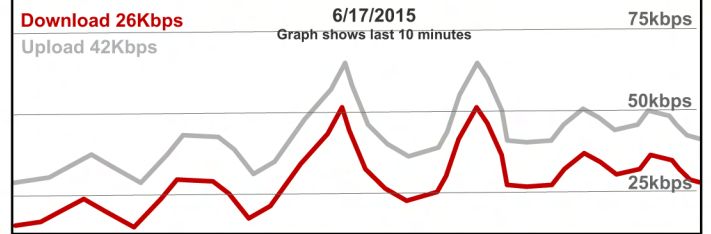

The biggest risk to your business has moved from the front door to your Internet connection.

IPitomy monitors everything so you don't need to worry. IP addresses from known global threat sites are automatically blocked from reaching into your private data; protecting your valuable information from the prying eyes of intruders. Protecting your business from interruptions due to malicious attacks and theft of personal data can be difficult and requires 24/7 vigilance. IPitomy is on the job 24/7.

Diagnostics

Collecting all of the diagnostic data and displaying it on an easy to use dashboard provides a complete snapshot of your network performance. Important metrics like jitter, latency, packet loss, MOS Score and network errors are all recorded and compiled into an easy to read screen. Alarm notifications are emailed to multiple parties automatically. Service technicians can easily spot the source of trouble and eliminate the root cause.

Realtime Throughput

IPitomy Monitoring Dashboard monitors your Network Vital Signs sending alerts when required

Proactive Prevention and Compliance testing with HIPPA and PCI Standards

Preventing unwelcome intrusion is central to the performance of the Router/Firewall. Another facet of prevention is to be proactive not only in blocking threats, but also in compliance to regulations. IPitomy can also test your compliance to PCI and HIPPA standards. Staying in compliance avoids unnecessary disruptions in business operations.

Complete Managed Services

- VoIP Performance
- Security
- Compliance
- Fail Over - 4g or alternate provider
- Content Filtering
- vMPLS - Save up to 70% over carrier MPLS
