

IPitomy Cloud Safety Net Service

Have a customized, dedicated PBX in the Cloud to ensure business continuity!

Don't miss calls during a business disruption. IPitomy Cloud Safety Net keeps you connected to your customers during all types of disruptions.

There are many reasons companies choose to keep their communications platform premise based. Trunking redundancy, less cost over time and Internet bandwidth issues are a few of them. Should a catastrophic event occur, it is always good to be prepared. IPitomy's Cloud Safety Net Service puts a PBX in the Cloud specifically programmed to establish your business's communications continuity at an affordable cost. When using IPitomy's robust SIP trunk packages, your trunks can automatically fail-over to a Cloud instance assuring you of business continuity.

Disaster recovery can include auto registration to the Cloud for on premise IPitomy phones should the need arise. If the Internet should fail, SIP calls can be routed to other offices or cell phones. IPitomy's Cloud Safety Net offers a fully programmable dedicated PBX in the Cloud so that customizable programming can be implemented on the fly. This allows you to adjust to disasters such as severe weather. Dynamic call routing options can meet your requirements. You can choose to back up all or even a fraction of your phones depending on your needs.

Rest assured that your calls will be answered during any type of business disruption. IPitomy's Cloud Safety Net can route your calls automatically to mobile phones should an outage occur.

Your Cloud PBX is ready whenever the need arises in the Amazon Cloud!
